

SUSTAINABILITY

Describe the role that members of the local community will play in implementing your project. What incentives (e.g., compensation, awards, certification, and promotion) will you provide to encourage local participation?

In collaboration with the members and professionals of the local community, the programs will be developed and implemented. This project will increase awareness of pre-pregnancy risks among vulnerable women/couples through preconception and interconception care. Perinatal professionals will be interviewed about their perceptions regarding the contents of the current preconception care interventions and used to adapt to develop and implement preconception and interconception care in (non-urban areas of) Suriname.

Identify any individuals in the local community who will be responsible for monitoring outcomes and ensuring continuity of services. How will you support these individuals to help them take on this leadership role?

Project manager, intervention developers and project assistants from Perisur will develop, implement, monitor and evaluate the outcomes of the programs. Perisur already years of experience in the field of maternal and newborn healthcare in Suriname including developing, implementing, monitoring and evaluating perinatal intervention programs.

BUDGET

SUSTAINABILITY

Have you identified a local funding source to ensure long-term project outcomes? Will you introduce practices to help generate income for ongoing project funding?

This project is based on an existing collaboration of organizations and professionals in Suriname that are committed to improve health and care for (pregnant) women/couples and their babies in Suriname.
